1. The first part of the paper is devoted to a discussion of the
 2. various methods of determining the rate of reaction. It is shown
 3. that the most reliable method is the one which involves the
 4. measurement of the change in concentration of the reactants or
 5. products over a period of time. This method is applicable to
 6. all reactions, but it is particularly useful for reactions which
 7. are slow and for which the concentration of the reactants or
 8. products can be measured accurately. The other methods, such as
 9. the measurement of the change in pressure or the change in
 10. the color of the reaction mixture, are only applicable to certain
 11. types of reactions.
